2003 Fact Sheet

The **2003 Philippines GSHS** measured dietary behaviors; hygiene; unintentional injuries and violence; mental health; tobacco use; alcohol and other drug use; physical activity; and protective factors.

The 2003 Philippines GSHS was a school-based survey of students aged 13-15 years. A two-stage cluster sample design was used to produce representative data for 13-15 year old students in Philippines. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 99%, the student response rate was 85%, and the overall response rate was 84%. A total of 7,338 students participated in the Philippines GSHS.
